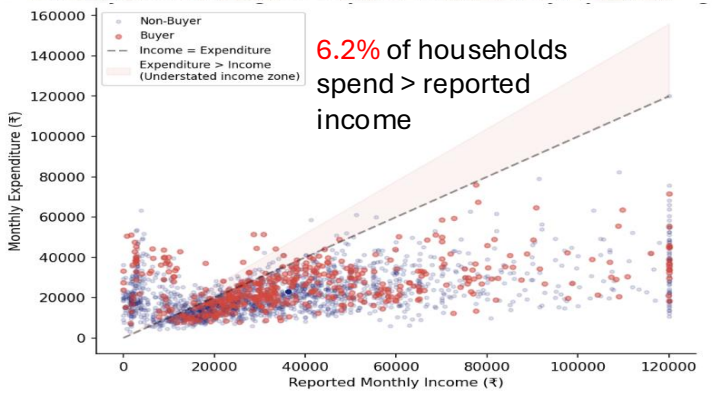
THE HIDDEN RICH: A PROXY-WEALTH TARGETING SYSTEM

Solving the "Income Bias" in Non-Metro India using Retailer-Node Triangulation & Gradient Boosting.

THE CONTEXT: INCOME IS A LIE.



- **The Trap:** NutriLife currently targets by Income > ₹50k.
- **The Failure:** This misses the "Business Class of Rural India" (Cash-rich farmers, SME owners with understated tax returns)
- **The Opportunity:** A ₹2.54 Lakh/Month untapped market in just 5 pilot districts.

"We don't need to create demand. We need to locate the hidden capacity to pay."

THE ENGINE: TWO-TIER TARGETING SYSTEM.

1

Step 1: The Analytical Moat (Model)

Input: Consumption Data (N=50k)
Algorithm: Gradient Boosting Classifier (GBM)
Metric: AUC = 0.915 (Precision: 88%)
Output: "Purchase Probability Score."

2

Step 2: The Operational Moat (Field Proxy)

Constraint: Sales reps cannot run Python models. Translating converted model features into a "3-Rule Check":
Fridge Proxy: Does retailer sell Chilled Milk? (Yes/No)
Wealth Proxy: Does retailer sell Premium Biscuits? (Yes/No)
Modernity Proxy: Does retailer sell Maggi/Ketchup? (Yes/No)

3

Step 3: The Output (Beat Plan)

Result: A "Retailer Stocking Score" (1-3)
Action: Distributor prioritizes Score 3 outlets

THE VERDICT.

	Revenue	Efficiency
Success	**153% LIFT** Purchase Probability in Target Segment vs. Base	**40% DROP in CAC** Zero wasted visits to low-yield villages

	LTV	Scale
LTV	**₹15,000** Lifetime Value of a "Rescued" Convenience Seeker	**150 DISTRICTS** identified as viable for rollout

THE TROJAN HORSE STRATEGY

Place Oats in the **Convenience Aisle** (next to Maggi), NOT the **Health Aisle** (next to Dals).

Rationale: Target the **Occasion** (Speed), not the **Ingredient** (Fibre).

MODEL: GBM_V2.0 | VALIDATION: 5-FOLD CV | PILOT: NORTH GOA & MAHBUBNAGAR | STATUS: READY FOR DEPLOYMENT
